Objective

Computer Science undergraduate passionate about AI, machine learning, and scalable software development with experience in LLMs, FastAPI, and deep learning.

Experience

AI Trainee — GRIL (NVIDIA Partner) — Global Infoventures 2025 – 2026

- Selected for an NVIDIA-affiliated AI training program focused on AI/ML projects and GPU computing concepts.
- Building hands-on experience in AI systems, machine learning workflows, and practical software applications.

Technical Skills

Languages: Python, JavaScript, Java

AI & Machine Learning: PyTorch, TensorFlow, Scikit-learn, OpenCV, NumPy, Pandas, LLMs, LangChain, LangGraph, RAG, Hugging Face, Prompt Engineering, AI Agent Systems

Backend & APIs: FastAPI, Node.js, Express.js, REST APIs, JWT Authentication, Socket.IO

Databases & Vector DB: MongoDB, PostgreSQL, Redis, ChromaDB

Cloud & DevOps: Docker, Git, Linux, AWS, Cloudflare R2

Core Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Projects

AI Interview Coach

2026

GitHub — Live Demo

Tech Stack: Python, FastAPI, LangGraph, LangChain, Mistral AI, React, Tailwind CSS, Docker

- Built an **AI-powered mock interview platform** using **LangGraph** and **Mistral AI** that analyzes resumes and job descriptions to generate personalized, role-specific technical interviews.
- Implemented an adaptive interview workflow using **LangGraph state management and interrupts**, dynamically adjusting question difficulty and generating follow-up questions based on answer scores.
- Developed a **React + Tailwind CSS frontend** with a **FastAPI backend**, supporting PDF resume parsing, real-time interview sessions, automated answer evaluation, and final assessment reports with hiring recommendations and personalized learning roadmaps.

AI Speech Analyzer

2026

GitHub — Live Demo

Tech Stack: Python, FastAPI, LangChain, Mistral AI, Faster-Whisper, JWT, MongoDB, Redis

- Built an **AI-powered speech analysis platform** using **Faster-Whisper** for speech-to-text transcription and **Mistral AI** via **LangChain** for automated speech evaluation and structured feedback.
- Designed an **asynchronous FastAPI pipeline** with **background task processing**, generating **JSON-based scores**, summaries, and personalized improvement recommendations.
- Implemented **speech history tracking** with **MongoDB** and secure **JWT authentication**, enabling users to access and review past AI-analyzed speeches.

Deep Research AI System

2026

GitHub — Live Demo

Tech Stack: Python, LangChain, FastAPI, Mistral AI, React, Vite, Tailwind CSS, Tavily API, BeautifulSoup

- Built a **multi-agent AI research system** using LangChain and Mistral AI where specialized agents autonomously perform web search, content extraction, report generation, and report critique from a single user query.
- Designed a **real-time streaming architecture** using FastAPI Server-Sent Events (SSE) and React to stream live agent progress, avoiding long synchronous requests and deployment timeout issues on Render.
- Integrated Tavily Search API and BeautifulSoup for automated web research and content extraction, producing structured Markdown reports with AI-generated critique and quality scoring through a responsive React interface.

Education

Qualification	Institution	Year	Score
B.Tech (CSE)	ABES Institute of Technology, Ghaziabad	2023–2027	-
12th (CBSE)	Kendriya Vidyalaya No.1 AFS Hindan, Ghaziabad	2023	90%
10th (CBSE)	Kendriya Vidyalaya No.1 AFS Hindan, Ghaziabad	2021	92%

Certifications

- LeetCode — Solved 200+ DSA problems (Arrays, Trees, Graphs, DP)
